## PROFESSIONAL SUMMARY

AI Engineer with a background in Artificial Intelligence and Data Science (2026) Graduate, specializing in Generative AI, LLM applications, RAG, and AI agent systems. Experienced in building scalable AI applications using Python, FastAPI, LiteLLM, multi-provider LLM routing, tool calling, web search, and PDF-based RAG Q&A. Developed a Multi-Tool AI Assistant with intelligent routing and model benchmarking, measuring latency, token usage, cost, and response quality across LLMs. Strong foundation in LLM orchestration, vector databases, embeddings, and API integration, with a focus on building production-ready GenAI solutions.

## TECHNICAL SKILLS

**Programming Languages:** Python, TypeScript

**Frameworks/Libraries:** FastAPI, LangChain, LangGraph, LiteLLM, ReactJS, Numpy, Pandas

**Tools:** Git, Github, Make.com, n8n, Gemini, Claude, OpenAI, LangSmith, CI/CD Pipelines

**Generative AI/LLMs:** LLM, RAG, Tool Calling, AI Agent, MCP, Fine-tuning

**Database:** MongoDB, MySQL, ChromaDB

**Core Concepts:** Prompt Engineering, REST APIs, API Integration, Hugging Face Embeddings

## PROJECTS

### Research Paper Assistant Using RAG — (React, Python, MongoDB)

- Developed a Research Paper Assistant using RAG that enables users to upload PDFs, perform semantic search, and generate context-aware answers from research documents.
- Implemented AI features including document chunking, embeddings, source-cited responses, semantic retrieval, and automatic Mistral/Gemini LLM fallback for reliable question answering.
- Indexed 50+ document chunks, achieved <3s average response time, improved answer quality by 35%, and reduced LLM hallucinations through retrieval-grounded generation.

### AI-Powered Code Reviewer — (Next.js, Python, MongoDB, Langchain, Langgraph, Langsmith)

- Built a AI-Powered Code Reviewer that analyzes multi-language code to detect bugs, security vulnerabilities, and code-quality issues with clear explanations.
- Solves the problem of manual and time-consuming code reviews by automatically identifying issues, suggesting improvements, and generating optimized refactored code.
- Developed performance benchmarking review latency, TTFT, token usage, API cost, achieving 2.4s average latency, 96% success rate, and Almost 1.3s latency in fastest model

## EXPERIENCE

### Automation with Gen AI — (CFRSI-Dr.Reddy's Foundation)

Jun 2026 – Sep 2026

- Built and implemented GenAI-powered automation solutions using Python, LLMs, RAG, LangChain, and LangGraph to automate real-world workflows and AI-driven tasks
- Built 2 production-oriented GenAI projects using LLM application, RAG and LangGraph workflow orchestration
- Reduced average LLM response latency by 30% by optimizing RAG retrieval and AI processing workflows.

### Artificial Intelligence — (Anapty CodeMy Technologies Private Limited)

Nov 2025 – Feb 2026

- Developed practical AI/ML solutions using Python, Pandas, NumPy, and Scikit-learn, covering data model development.
- Implemented end-to-end machine learning workflows, including model training, evaluation, and performance analysis.
- Built 3 AI/ML projects and achieved up to 92% model accuracy, improving model performance through iterative experimentation and evaluation.

## EDUCATION

### Dhanalakshmi College of Engineering — Tambaram, Chennai

Oct 2022 – May 2026

B.Tech - Artificial Intelligence and Data Science

CGPA : 8.32 /10

## CERTIFICATE

AWS Academy Graduate — AWS Academy Cloud Foundations

Data Science — Prodigy Info Tech
